Professional Summary

Senior Backend & Full-Stack Developer with 10+ years of experience in building scalable, high-performance web applications, backend systems, and microservices. Deeply specialized in backend architecture using PHP (Laravel, CodeIgniter) and modern Python frameworks (FastAPI). Proven track record of designing robust REST APIs, integrating complex third-party services like Stripe for global OTT platforms, and managing relational databases including MySQL and PostgreSQL. Passionate about modernizing developer workflows by actively building within the AI ecosystem—leveraging LLM APIs and AI-assisted tooling to engineer intelligent command-line tools and backend systems.

Employment History

Senior PHP Developer, Ventuno Technologies (P) Ltd, Chennai

08/2019 - 01/2026

- Manage and enhance backend for OTT platform applications, ensuring high performance and scalability.
- Develop and maintain scalable REST APIs for web and mobile platforms using PHP and MySQL.
- Lead backend development with CodeIgniter, integrating third-party services like Stripe for secure transactions.
- Collaborate with cross-functional teams to design and implement new features based on client requirements.
- Conduct code reviews and mentor junior developers to optimize team workflows.
- Manage server setups, ensuring reliable hosting environments for all projects.
- Implemented Memcache logic to improve application performance.
- Utilized AI tools for CI3 to CI4 migration, enhancing the development process.
- Integrated complex payments for various endpoints.
- Written Postman Tests for REST APIs to ensure functionality.

PHP Developer, O Clock Software Pvt Limited, Chennai

04/2014 - 07/2019

- Developed dynamic websites and applications using PHP, MySQL, and JavaScript, focusing on full-stack development.
- Utilized Laravel framework for building scalable web applications.
- Created custom WordPress themes and plugins to meet diverse client needs.
- Integrated Stripe Payment Gateway for secure online transactions.
- Implemented web services for cross-platform communication.
- Enhanced user experience with Google Places and Translation API integrations.
- Worked with Google Cloud Storage for reliable and scalable storage solutions.
- Contributed to a wide range of projects, from e-commerce to corporate websites.
- Collaborated directly with clients to deliver tailored web solutions.

Projects

Atelier Cocktail,
Web Designing and content management using Wordpress

https://www.atelier-cocktail.com/

Polished RX,

Web Designing and content management using Wordpress

https://www.polishedrx.com/

kweliTV,
OTT Platform | Backend APIs for Web, Mobile and CTV | Payment Integration

- Designed and maintained scalable REST APIs supporting Web, Mobile and CTV applications.
- Integrated Stripe payments handling SVOD/TVOD transactions with secure webhook validation.
- Built backend services using PHP, MySQL and CodeIgniter, ensuring high performance and reliability.
- Supported production systems serving 50K+ monthly users with 99.9% uptime.

Lit TV & HTV Fun,
OTT & Web Platforms | Backend API & Payment Integration

- Developed backend APIs to power content delivery for web-based OTT platforms.
- Implemented secure, optimized API endpoints and Stripe Payment integrations to support seamless user checkout experiences.

AI Terminal Assistant, Python | LLM APIs | CLI Development

- Developed a lightweight Command Line Interface (CLI) tool using Python to interact directly with Large Language Models from the terminal.
- Engineered robust API request handling, including error management for rate limits and quota restrictions across different AI providers.
- Designed the tool to accelerate developer workflows by enabling quick, in-terminal query resolutions.

User Management API Microservice,
Python | FastAPI | PostgreSQL | REST APIs | Swagger UI

- Designed and developed a high-performance RESTful API microservice for comprehensive user management using Python and FastAPI.
- Implemented full CRUD operations integrating seamlessly with a PostgreSQL database.
- Enforced strict data validation and serialization using Pydantic schemas, ensuring secure API responses.
- Leveraged FastAPI's built-in OpenAPI capabilities to generate interactive Swagger UI documentation.
